Start with a safety question

Search by molecule, target, endpoint, modification, source, PMID DOI, or off-target mechanism.

sources	source tasks	candidates	molecules	toxicity release	off-target release
36245	70283	41114	1012	626	111

PRIMARY WORKFLOWS

Start from a citable release record, a mechanism question, a provenance packet, or a benchmark release task.

- [Browse verified evidence](#)
- [Off-target mechanisms](#)
- [Safety trigger report](#)
- [Reuse benchmark splits](#)

Safety-focused
 AntisenseRNA testing and off-target evidence, not a broad RNA therapeutics setting.

Reuser-oriented
 Each release record links to source metadata, exact location, and cursor audit trail.

Reusable
 Bulk CSV/JSON downloads plus fixed Grade A/B benchmark splits.

Release and Reuse

Verified evidence **377**

Benchmark reuse **344**

Citable release **toxicity** A ASD

toxicity_evidence1
phosphorothioate ASO panel from PMID 43760661

phosphorothioate ASO panel from PMID 43760661 links ASO context to DNA damage response.

Evidence endpoint DNA damage response	Target and disease not specified	Source location Results + ASO treatment cause activation of DNA repair enzymes and these proteins are enriched in ASO-seeded PS bodies, paragraph L3
Source title Dysregulation of the DNA damage response by phosphorothioate antisenese oligonucleotides	Evidence grade rationale High-confidence curator-verified evidence with strong source location	Provenance status source location verified by curator audit

Dosage limitations

- Exact release-grade oligo sequence is not curated for this record.
- Chemical modification fields should be treated as incomplete unless source text is inspected.
